Guide to Ram Selection

- Objective Measurement figures are only one part of the ram selection process.
- Rams must be structurally acceptable for the characteristics the buyer is seeking.
- Rams must also be suitable for the environment and climate which they are going to be used.
- Buyers should ensure they are satisfied with the conformation, size, wool type and development of each ram.
- Having selected rams for subjective and visual requirements the buyer can then use the objective measurement and test results to refine their final selection.

How to manage your rams - the Brundanella way

Your rams are the most important sheep on the place. They have a high value in themselves and it is they who will dictate the future productivity of your flock. So DON'T put them out of your mind until just before joining; keep them in good condition ALL the year. Put them in the best paddock. Heat and sun are enemies of fertility, so see that they have good cool shade - and do not disturb them in hot weather.

Shear your rams twice a year; they should have six to eight weeks' wool at joining time. Keep their horns and feet trimmed at all times - if they cannot walk they cannot work. Keep them free of blowfly and do not dip them within two months of joining.

As joining time approaches, check mouths and testes and reject faulty ones. Four to six weeks before they go to work start feeding them a mixture of lucerne, hay and lupins or maize; this 'steams them up' for the job ahead.

In short, we would ask you to take the same pride in your rams as we do.

Health Status - VACCINATIONS:

- **16-09-2025:** Vaccinated with GlanEry 7 in 1 + B12
- **12-11-2025:** Vaccinated with Cydectin Weanerguard
- **30-11-2025:** Jetted with Cyrex
- **11-03-2026:** Drenched with Zolvix Plus

Brucellosis accredited free No. 76365. Footrot free (owner declared) No. 2036

PURE CLASS

*Our quality, size
and growth rate
is our difference.*

2025 Sale Ram Averages

FD Average Micron - **19.3mm**
SD Average Standard Deviation - **3.1**
BWT Average Body Weight - **92.2kg**
CF Average Comfort Factor - **99.4%**
EMD Average Eye Muscle Depth - **38.2**
FAT Average Fat Depth - **5.0**
BWS Average Breech Wrinkle - **1.6**

*Achieve greater
profitability in
your flock*

**BY USING
BRUNDANELLA
GENETICS**

Mid Side samples and Body weights taken on **24-07-2026**.

Testing done by **Riverina Wool Testers**, Wagga Wagga.

Muscle scanning and Fat scoring taken on **07-08-2026**

by **Rick Power** (SGA Accreditation # 18017).

All sale rams are **July/August 2025 drop** and were shorn on **06-03-2026**.

Sires in Use

No A.I. carried out in 2025 - all sires are home grown, resident rams.

B.A. SYN: A syndicate of three Brundanella bred sires all by Brundanella "Big Al" - supreme poll exhibit at Great Southern Supreme Merino (G.S.S.M.) and Grand Champion Fine/Medium Poll Ram at Sydney Royal Easter Show.

DAVO: Reserve Grand Champion Poll Ram GSSM. 2024 x One Oak Poll Red 31 - used by many studs showing a balance of quality and volume in mean and wool.

M.S.: A syndicate of Brundanella Stud sires of One Oak Poll and Moorundie Poll breeding, joined to Stud maidens.

S.S.: A syndicate of special stud rams joined to special stud ewes, mainly of Roseville Park and Yarrawonga breeding.

Explanation of Terms

F.D.: FIBRE DIAMETER - Expressed in Microns

S.D.: STANDARD DEVIATION - The measure in micron of the spread of fibres. The lower, the better when comparing rams of the same micron, a lower SD usually means higher quality wool.

BWT%: BODY WEIGHT % - Body weight expressed as a %. 100% is average, higher is better. Our aim is to breed animals that mature quickly and reach a higher weight before they cut their teeth.

C.F.%: COMFORT FACTOR - Percentage of fibres less than 30

micron, the higher the better. The general rule is that less than 95% comfort factor may cause prickle when worn next to the skin.

EMD: EYE MUSCLE DEPTH - Expressed in millimetres of muscle depth. Rams with a higher figure produce lambs with a higher

yeilding carcase and are generally better doing animals.

FAT: FAT DEPTH - Expressed in millimetres. Rams with a higher fat figure will generally hold their condition better and bounce back quicker after stressful times.

BWS: BREECH WRINKLE SCORE - Expressed as a score of 1, 2, 3, 4 or 5.

An animal with a score of 1 has no wrinkle. A score 5 animal has extensive wrinkle at the tail set and extending down the hind leg to the hocks.

Top price ram at 2025 On Property Sale

Rick Power, Janet Griffith, Austin and John Taylor. Top Price \$5,250.

Brundanella Sire Davo

Brundanella Sire Davo - middle ram

Sire Davo's wool

Upcoming AI Sire Zac

Welcome to Brundanella

Ian and Janet Griffith know that performance, flexibility and versatility are the crucial elements in the continuing viability of their own grazing and cropping enterprises.

The same concepts apply in their Merino Stud. Breeding a Merino that makes you money is the key objective, and the balanced approach adopted by the Griffiths and Stud Classer Michael Elmes, is resulting in an all round Merino production unit capable of maximising returns in a variety of markets and enterprises.

All rams are sold on the property (not multi vendor sales) to allow all prospective clients equal opportunity to purchase the top rams.

Bold crimping

Bright soft wool

Performance

Versatility

Junior Champion at GSSM Show 2024

22-200 (Junior) At his only showing, was Junior Champion Poll Ram at GSSM Show at Bathurst. With handler Tim Partridge and Ian Griffith.

What makes Brundanella the best

A balanced approach to micron, body weight and fleece weight have produced an animal that is continuing with micron reduction whilst increasing body and fleece weights – all important traits that contribute to flock productivity.

One inherent trait is the superior fertility, giving growers more surplus sheep sales and greater selection pressure.

The large early maturing frames of the Brundanella sheep are favoured by the market, constantly achieving price premiums and therefore greater profitability.

Brundah

KELPIE STUD
